G32460	4,230 ft	subsea20	— pending

Status, dates & per-lease detail pending the [BSEE lease ingest \(#959\)](#).

Provenance: Basis: in-repo YAML (superseded TotalEnergies pre-FID case) reconciled against current public record. North Platte was discovered 2012 (Cobalt/Total, Garden Banks). TotalEnergies (then 60% op, Equinor 40%) withdrew Feb 2022; Shell bought 51% and took operatorship from Equinor (49%), redesigned and renamed the project "Sparta." Shell took FID Dec 2023; first oil projected 2028 (left blank — not yet producing). Water depth ~4,265 ft, subsalt Wilcox, newbuild semisubmersible FPU (8 subsea wells) with ~90,000 boe/d peak (~75 mbopd oil plateau; GOR 1100 scf/bbl from YAML). LOW-CONFIDENCE: capex — YAML's \$6B reflects the abandoned TotalEnergies ~\$5-7B concept, not Shell's simplified Sparta scope (not publicly disclosed), so not available; opex and projected COP year not publicly defensible.
