Bureau of Safety and Environmental Enforcement Well Activity Reports · data as of: 2025-08-03 (latest recorded completion activity in the reference workbook; acquisition cut-off not recorded)

Well operations and geometry

Well activity, depth and surveyed geometry provide context for the reference population. The twelve lease-name groups include separate Cascade and Chinook and Jack and St. Malo groups. Kaskida and Tiber are recorded as pre-final-investment-decision; North Platte is recorded as non-producing.

217
well records with a recorded well identifier

12
lease-name groups in the reference population

WHAT YOU GET

- Spud-to-total-depth drilling spans and total-depth-to-final-activity completion spans
- Well depth and water-depth context; maximum measured depth: 37,743 feet
- Julia survey trajectories linked to well identification and surface locations
