Status, dates & per-lease detail pending the [BSEE lease ingest \(#959\)](#).

Provenance: Facts from in-repo YAML (operator, WI Chevron 51%/Equinor 24.5%/Suncor 24.5%, capex \$7.5B, opex \$15/boe, plateau 94 mbopd, GOR 1200, status producing, data through 2024-12-31). Life-cycle dates from public sources: St. Malo discovered Oct 2003 and Jack Jul 2004 (discovery year=2003, earliest of pair); FID/sanction Oct 2010; first oil per Chevron press release Dec 2014 ("2014-12") — this OVERRIDES the YAML's first oil "2014-02-01", which appears erroneous. Water depth ~7000 ft at the FPU (Jack WR758/759 ~7000 ft, St. Malo WR678). host = Semisubmersible FPU. projected end-of-production not confidently estimable. lease year not available; no schedule-driving incident.
