LEASE	DEPTH	DEV	STATUS
G19555	5,860 ft	subsea20	— pending
G25792	5,860 ft	subsea20	— pending

Status, dates & per-lease detail pending the [BSEE lease ingest \(#959\)](#).

Provenance: Discovery 2006 (Keathley Canyon 292, Lower Tertiary Wilcox), FID/sanction July 30 2024 (BP 100%, Devon's original 30% exited), first oil targeted 2029 but left blank as no oil has flowed and the Aug-2025 BOEM DPP rejection likely pushes it out. Public sanctioned figures used over YAML where they diverge: plateau/nameplate 80 mbopd (YAML said 120) and capex ~\$5bn for Phase 1 (<\$5B per BP; YAML total CAPEX 10000 = \$10bn is a full-field/multi-phase estimate). GOR 1000 scf/bbl and data through 2024-12-31 from YAML. Water depth ~6,000 ft, 20,000-psi semisubmersible FPU. Low-confidence: capex (phase-1 vs full-field ambiguity), water depth (rounded), lease year unknown, opex unknown.
