Status, dates & per-lease detail pending the [BSEE lease ingest \(#959\)](#).

Provenance: Life-cycle dates and ownership from public sources (Offshore Technology, Offshore Magazine, OGJ, Heerema, Rigzone); economics (capex \$2.9B, plateau 75 mbopd, GOR 1400 scf/bbl, opex \$18/boe) and data through from in-repo YAML. IMPORTANT: two YAML values were overridden as demonstrably wrong vs. well-documented public record — YAML first oil "2021-08" corrected to 2012-02 (Cascade first oil Feb 2012, Chinook Sep 2012; BW Pioneer was the first FPSO in the US GoM), and YAML operator/WI "TotalEnergies 60% / Equinor 40%" corrected to current MP Gulf of Mexico LLC (Murphy EXPRO 80% operator, Petrobras America 20%; originally Petrobras-operated with Total 33.33% in Chinook). LOW CONFIDENCE: FID year (sanction ~mid-2000s, no firm public citation — not available), lease year and projected end-of-production (not available); water depth 8,200 ft is the Cascade value (Chinook ~8,600 ft); capex is a YAML assumption not independently verified.
